

# First Response Tracker - Quick Start Guide

## OVERVIEW

First Response Tracker is a small mobile app that runs on iPhones and iPads and transmits its location to pilots and incident commanders in the same organization.

## INSTALLATION AND FIRST TIME USE

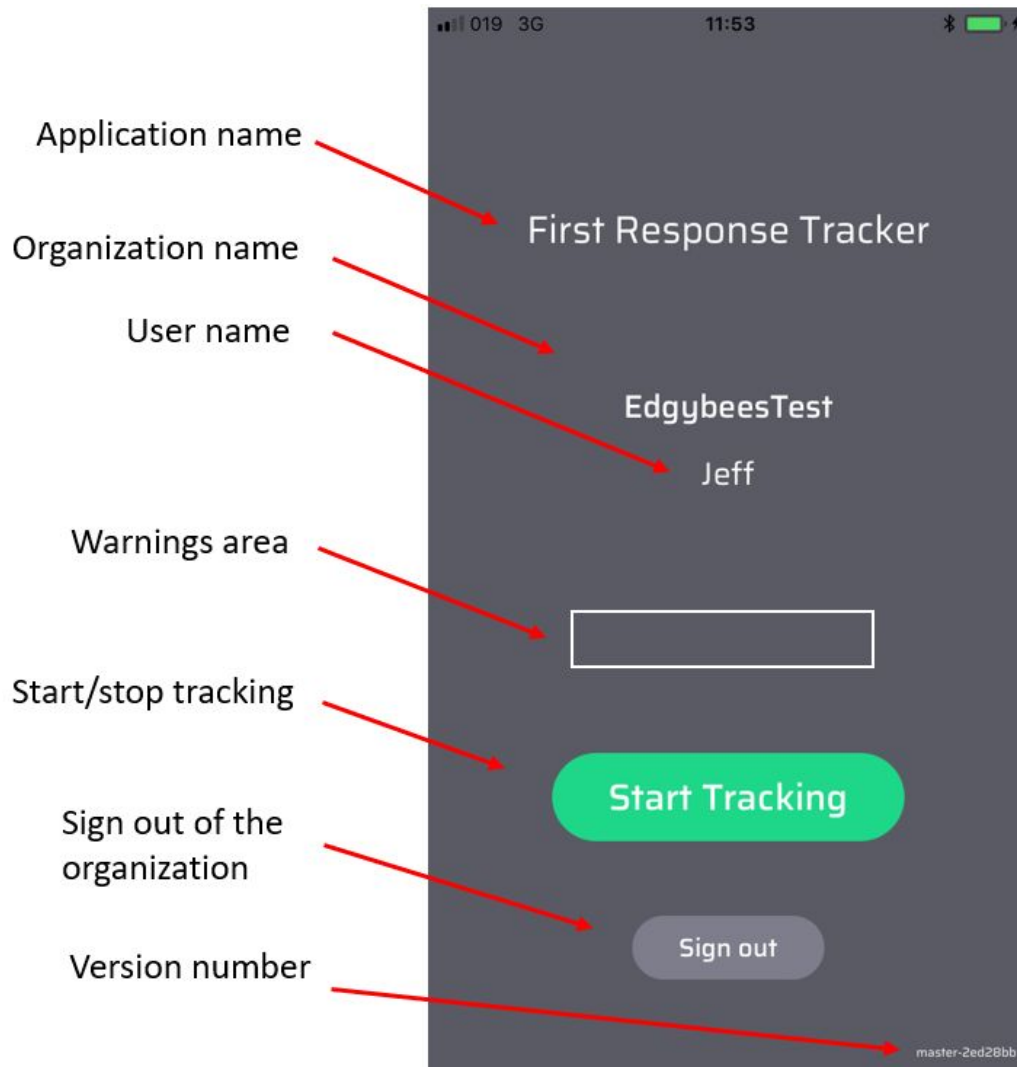

First Response Tracker is available in the Apple [App Store](#) and Google [Play Store](#).

When running the app for the first time, accept the terms of service and then enter the product key of your organization. If you don't have one, please contact [fr@edgybees.com](mailto:fr@edgybees.com).

Next, enter your name. This name will appear next to the marker indicating your location in the First Response Air and First Response C&C apps.

Note that next time the app starts, the previously typed name will appear in the name field, so you could simply tap OK to continue (the name can also be modified if needed).

## DISPLAYS

Note that the first time tracking is activated you will need to allow the app to access the device's location. However, even if you haven't done so, this permission can still be set using the device's Settings->Privacy->Location Services->First Response Tracker menu.

The sign out button allows you to unregister from the current organization and will bring up the Enter Product Key screen.

### **INTERNET CONNECTIVITY**

The First Response Tracker app requires Internet connectivity for transmitting its location.
